## A Foundation Based on Risk Management

We take a disciplined and hands-on approach to risk management in an effort to protect your organization's assets. By educating our policyholders, identifying vulnerabilities to risk, and taking the necessary steps to minimize financial consequences, we can help ensure that your people, property, and finances are properly protected. When examining the risks of your organization we follow these five steps:

- 1. Risk identification and measurement:** This involves examining your business—from property holdings to operational processes—and identifying risks that could threaten your organization's assets. We then estimate each risk's potential financial impact on your organization's asset base.
- 2. Risk avoidance and reduction:** This is the process of averting or mitigating risk through operational planning and loss prevention/safety programs.
- 3. Risk retention:** This is the act of self-funding certain types and amounts of risk.
- 4. Risk transfer:** This practice refers to the deflection of risk away from your organization and onto others, e.g., through the use of indemnity and hold-harmless agreements.
- 5. Risk monitoring and adjustment:** This is the periodic process of re-examining your chosen risk management strategies and adjusting them to fit your organization's financial and other objectives.
