Research and Data

Definition of Compensation

Compensation is defined as the assessable compensation reported to The Church Pension Fund (CPF) and includes, cash salary, utilities, payments made to Social Security, and housing, either in the form of a housing allowance, or if church housing is provided, as 30% of salary. Compensation also includes contributions to individual retirement accounts (where applicable), cash gifts to bishops, and the payment of school fees for bishops' children. This compensation amount does not include the pension assessment payments made to CPF or any other standard employee benefit.

Compensation for bishops who are retired, but who are still performing Episcopal functions, is not included.

Median compensation represents the 50th percentile of the compensation data. Low Range represents the 25th percentile, and High Range represents the 75th percentile.

Understanding the Quintiles

To create the quintiles, we implemented standardized scores on four dimensions of diocesan size: the number of full-time clergy, total bishop compensation, the number of congregations, and the sum of total congregational revenues. We then aggregated those standardized scores and ranked the domestic dioceses from 1 to 99 on the basis of this index. Quintiles group these ranked dioceses into 5 categories from the top 20 largest dioceses down to the 19 smallest dioceses.

Understanding the Similar Clusters

To create the similar clusters of dioceses, we implemented the machine learning technique called "cluster analysis," which aggregates dioceses in such a way that they share more similarities within the same group when compared to other groups. Their degree of similarities is based on four dimensionsⁱ: geographical location, demographic data, socioeconomic status, and average Sunday attendance (ASA). We then assigned these clusters of dioceses to twelve distinct categories based on our overall understanding of the locales of these clusters. These similar clusters provide a data-driven perspective about how closely related a diocese is when compared to another.
